

Clair

Timothy Early

For Haylage and Forage

Clair

EARLY TIMOTHY

Clair Timothy is a dynamic high yielding, high quality, rust resistant, early maturing variety that ages 1-2 weeks earlier than other varieties. It has high first and second year forage production, performing best in soils with a pH between 5.5 to 7.0.

Seeding Rate:

Straight: 10-12 lbs. per acre

Areas of Use: Clair Timothy is primarily used for hay and fits well in mixtures with an adapted legume such as alfalfa or red clover. It is a top choice for horse pastures due to early production, excellent endurance and outstanding yields (over 24% higher than the average in recent trials). Can be seeded in late summer/early fall or late winter/early spring. Not suitable for very wet soils, drought areas or climates with prolonged high temperatures. Will tolerate somewhat poorly drained soils.

- Outstanding yields
- Great for haylage
- Strong endurance
- Rust resistant
- High quality forage

Growth Habit	Estab. Rate Days	pH Range	Dry Matter Yield	Nitrogen Required	Anerobic Soil Tol.	CP%	NDF	ADF	Endophyte Enhanced
