

Incinerator

Forage Brassica Blend

For Cover Crops and Forage

BLEND INCINERATOR

Incinerator Blend is a proprietary four-way blend of brassicas including Arugla, White Mustard, Forage Rape and Daikon Radish. It is well suited for pre potato or sugar beet fall cover cropping. It will reduce soil compaction, increase organic soil matter, trap nutrients for future crops, reduce soil erosion, facilitate no-till planting, increase productivity, suppress weeds, retain soil moisture, improve soil tilth and quality, break through compacted soils and work as a bio fumigant to suppress nematodes. It also produces high levels of green matter for incorporating.

Seeding Rates:

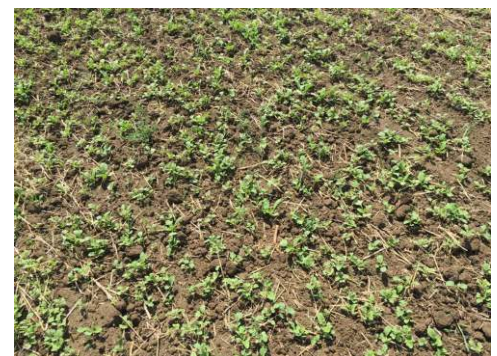

Drilled: 8-10 lbs. per acre

Broadcast: 10-15 lbs. per acre

Areas of Use: *Incinerator Blend* is recommended for use as a cover crop to fracture plow and mine nutrients in 12-24 inch depths. It is best planted from July to August.

- High glucidenate levels
- Effective bio fumigate
- Breaks compacted soils
- Increases soil nutrients
- Green matter plow down

Brassica Type	Estab. Rate Days	pH Range	Dry Matter Yield	Nitrogen Required	Anerobic Soil Tol.	Cold Tolerance	Drought Tolerance	Endophyte Enhanced	Salinity Tolerance
Blend	Fast 5-7	5-8	up to 2-2.5 tons/ac	50 lbs/ac	Moderate	Good	Fair	No	Fair
